

# The impact of financial crisis on savings decisions: evidence from Italian pension funds

M. Maré, L. Di Gialleonardo, A. Motroni, F. Porcelli

Discussion by Simone Tedeschi,  
Department of Economics, University of Roma Tre

Mopact International Workshop  
8-9 September 2016 , Collegio Carlo Alberto, Moncalieri, Turin

# Presentation Outline

The impact of  
financial crisis  
on savings  
decisions:  
evidence from  
Italian  
pension funds

## 1 Introduction

M. Maré, L.  
Di  
Gialleonardo,  
A. Motroni,  
F. Porcelli

## 2 Motivation and main conclusions

Introduction

## 3 Preliminary considerations

Motivation  
and main  
conclusions

## 4 The econometric application

Preliminary  
considerations

## 5 General comments and policy implications

The  
econometric  
application

General  
comments and  
policy  
implications

# Aims of the paper

The impact of financial crisis on savings decisions: evidence from Italian pension funds

M. Maré, L. Di Gialleonardo, A. Motroni, F. Porcelli

Introduction

Motivation and main conclusions

Preliminary considerations

The econometric application

General comments and policy implications

The paper deals with an important life cycle issue:

- Empirical evaluation of the attitude towards pension funds
- Impact of the financial crisis on households saving decisions in private pension schemes

Using a novel dataset which surveys pension-related issues so far little investigated for Italy.

# Presentation Outline

The impact of  
financial crisis  
on savings  
decisions:  
evidence from  
Italian  
pension funds

## 1 Introduction

M. Maré, L.  
Di  
Gialleonardo,  
A. Motroni,  
F. Porcelli

## 2 Motivation and main conclusions

Introduction

## 3 Preliminary considerations

Motivation  
and main  
conclusions

## 4 The econometric application

Preliminary  
considerations

## 5 General comments and policy implications

The  
econometric  
application

General  
comments and  
policy  
implications

# Why pension funds (PFs)

The impact of financial crisis on savings decisions: evidence from Italian pension funds

M. Maré, L. Di Gialleonardo, A. Motroni, F. Porcelli

Introduction

Motivation and main conclusions

Preliminary considerations

The econometric application

General comments and policy implications

Since sustainability of public pension expenditure has been put under control, authors rightly emphasize

- Importance of worrying about future adequacy of pension benefits
- Point out the importance of a stronger development of the second pillar which, in Italy, despite the adoption in 2008 of a mechanism of automatic enrollment, still lags behind

# Bottom line of the paper

The impact of  
financial crisis  
on savings  
decisions:  
evidence from  
Italian  
pension funds

M. Maré, L.  
Di  
Gialleonardo,  
A. Motroni,  
F. Porcelli

Introduction

Motivation  
and main  
conclusions

Preliminary  
considerations

The  
econometric  
application

General  
comments and  
policy  
implications

- Financial turmoil did not affect PFs membership
- PFs are perceived as a safe way to save for retirement

# Presentation Outline

The impact of financial crisis on savings decisions: evidence from Italian pension funds

## 1 Introduction

M. Maré, L. Di Gialleonardo, A. Motroni, F. Porcelli

## 2 Motivation and main conclusions

Introduction

## 3 Preliminary considerations

Motivation and main conclusions

## 4 The econometric application

Preliminary considerations

## 5 General comments and policy implications

The econometric application

General comments and policy implications

- Appreciations: The analysis provides important piece of information on the distribution of PFs membership conditional on observable characteristics
- Criticisms:  $\Rightarrow$

# On adequacy

The impact of  
financial crisis  
on savings  
decisions:  
evidence from  
Italian  
pension funds

M. Maré, L.  
Di  
Gialleonardo,  
A. Motroni,  
F. Porcelli

Introduction

Motivation  
and main  
conclusions

Preliminary  
considerations

The  
econometric  
application

General  
comments and  
policy  
implications

Adequacy is about  
intra-cohort future incomes distribution  
as well as inter-cohort

# On membership dynamics

The impact of financial crisis on savings decisions: evidence from Italian pension funds

Dynamics appears to be sustained, especially in the biennium 2006-2007.  $\Rightarrow$  following slowdown a clue of a possible negative impact of the great crisis?

M. Maré, L. Di Gialleonardo, A. Motroni, F. Porcelli

Introduction

Motivation and main conclusions

Preliminary considerations

The econometric application

General comments and policy implications

Figure 1. Membership of pension funds (1999-2014)

# Presentation Outline

The impact of  
financial crisis  
on savings  
decisions:  
evidence from  
Italian  
pension funds

## 1 Introduction

M. Maré, L.  
Di  
Gialleonardo,  
A. Motroni,  
F. Porcelli

## 2 Motivation and main conclusions

Introduction

## 3 Preliminary considerations

Motivation  
and main  
conclusions

## 4 The econometric application

Preliminary  
considerations

## 5 General comments and policy implications

The  
econometric  
application

General  
comments and  
policy  
implications

# The model

The impact of financial crisis on savings decisions: evidence from Italian pension funds

M. Maré, L. Di Gialleonardo, A. Motroni, F. Porcelli

Introduction

Motivation and main conclusions

Preliminary considerations

The econometric application

General comments and policy implications

- Probit regression on a 2 wave pool of cross-sections:

$$I_t = \beta_0 + \beta_1 Y_{2012} + \beta_2' W_t + \beta_3' D_t + \beta_4' C_t + \varepsilon_t$$

where:

$t$  = survey wave index

$I_t$  = dummy=1 if interviewee is a pension fund member

$Y$  = survey wave dummy (2008 omitted)

$W_t$  = matrix of occupational, wealth and income variables

$D_t$  = matrix of ideology and demographic variables

$C_t$  = matrix of variable related to confidence in pension funds

# On the covariates

The impact of financial crisis on savings decisions: evidence from Italian pension funds

M. Maré, L. Di Gialleonardo, A. Motroni, F. Porcelli

Introduction

Motivation and main conclusions

Preliminary considerations

The econometric application

General comments and policy implications

Authors should show descriptive statistics, in particular on:

- Income (does it match other sources like the SHIW?)
- Questions related to individuals' trust in PFs (how are they distributed in 2008 and 2012?). Could provide a first empirical evidence for the claim that funds are perceived as a safe way to save for retirement.

# Main determinants of the likelihood to be enrolled in a PF

The impact of financial crisis on savings decisions: evidence from Italian pension funds

M. Maré, L. Di Galleonardo, A. Motroni, F. Porcelli

Introduction

Motivation and main conclusions

Preliminary considerations

The econometric application

General comments and policy implications

- Working in sectors where big companies prevail (intuitive)
- Union membership (correlation or causality?)
- Other financial asset holding (worrying for adequacy)

# Timing (1)

The impact of financial crisis on savings decisions: evidence from Italian pension funds

M. Maré, L. Di Gialleonardo, A. Motroni, F. Porcelli

Introduction

Motivation and main conclusions

Preliminary considerations

The econometric application

General comments and policy implications

Is there a proper “pre” in the data?

- “The active phase of the crisis, which manifested as a liquidity crisis, can be dated from August 9, 2007, when BNP Paribas terminated withdrawals from three hedge funds citing a complete evaporation of liquidity”
- “Between June 2007 and November 2008, Americans lost an estimated average of more than a quarter of their collective net worth [...] During the same period [...] pension assets lost 1.3 trillion.” (Wikipedia)

# Timing (2)

The impact of financial crisis on savings decisions: evidence from Italian pension funds

M. Maré, L. Di Gialleonardo, A. Motroni, F. Porcelli

Introduction

Motivation and main conclusions

Preliminary considerations

The econometric application

General comments and policy implications

Is there a proper “pre” in the data?

- The figure shows that the bulk of decrease in net returns of Italian PFs shows up in 2008...

| Anni | Fondi pensione negoziali | Fondi pensione aperti | PIP “nuovi” ramo I | PIP “nuovi” ramo III | TFR |
|------|--------------------------|-----------------------|--------------------|----------------------|-----|
| 1999 | -                        | 24,0                  | -                  | -                    | 3,1 |
| 2000 | 3,5                      | 2,9                   | -                  | -                    | 3,5 |
| 2001 | -0,5                     | -5,6                  | -                  | -                    | 2,9 |
| 2002 | -3,4                     | -13,1                 | -                  | -                    | 3,1 |
| 2003 | 5,0                      | 5,7                   | -                  | -                    | 2,8 |
| 2004 | 4,6                      | 4,3                   | -                  | -                    | 2,5 |
| 2005 | 7,5                      | 11,5                  | -                  | -                    | 2,6 |
| 2006 | 3,8                      | 2,4                   | -                  | -                    | 2,4 |
| 2007 | 2,1                      | -0,4                  | -                  | -                    | 3,1 |
| 2008 | -6,3                     | -14,0                 | 3,1                | -21,9                | 2,7 |
| 2009 | 8,5                      | 11,3                  | 3,1                | 14,5                 | 2,0 |
| 2010 | 3,0                      | 4,2                   | 3,2                | 4,7                  | 2,6 |
| 2011 | 0,1                      | -2,4                  | 3,2                | -5,2                 | 3,5 |
| 2012 | 8,2                      | 9,1                   | 3,3                | 7,9                  | 2,9 |
| 2013 | 5,4                      | 8,1                   | 3,2                | 10,9                 | 1,7 |
| 2014 | 7,3                      | 7,5                   | 2,9                | 6,8                  | 1,3 |
| 2015 | 2,7                      | 3,0                   | 2,5                | 3,2                  | 1,2 |

(1) I rendimenti sono al netto dei costi di gestione e dell'imposta sostitutiva per tutte le forme pensionistiche incluse nella tavola; anche per il TFR la rivalutazione è al netto dell'imposta sostitutiva. Per la metodologia di calcolo, cfr. anche Glossario, voce "Indice

# Identification (5)

The impact of financial crisis on savings decisions: evidence from Italian pension funds

M. Maré, L. Di Gialleonardo, A. Motroni, F. Porcelli

Introduction

Motivation and main conclusions

Preliminary considerations

The econometric application

General comments and policy implications

I am not sure  $\beta_1$  itself capable to pick up the impact of financial crisis on the dependent variable of the model...

- Time dummy can control for indistinct aggregate effects on the intercept (i.e. common to all individual);
- Tells how much the average membership probability in 2012 is different from the average in 2008
- Even in the sample restricted to those individuals not affected by Monti-Fornero reform. Why direct involvement in the reform be the only confounding factor?
- Why instead trust in PFs is conceived as a confounding factor rather than a possible outcome for the effect of financial crisis?

# Identification (6)

The impact of  
financial crisis  
on savings  
decisions:  
evidence from  
Italian  
pension funds

M. Maré, L.  
Di  
Gialleonardo,  
A. Motroni,  
F. Porcelli

Introduction

Motivation  
and main  
conclusions

Preliminary  
considerations

The  
econometric  
application

General  
comments and  
policy  
implications

- Authors conclude that financial turmoil did not affect PFs membership  
⇒ Neither the adoption of the of the auto-enrolment rule nor the global crisis affected the individuals' attitude towards pension funds.

# Identification (6)

The impact of  
financial crisis  
on savings  
decisions:  
evidence from  
Italian  
pension funds

F. Porcelli

Introduction

Motivation  
and main  
conclusions

Preliminary  
considerations

The  
econometric  
application

General  
comments and  
policy  
implications

- Authors conclude that financial turmoil did not affect PFs membership  
⇒ Neither the adoption of the of the auto-enrolment rule nor the global crisis affected the individuals' attitude towards pension funds.
- Can we rule out the opposite statement:  
both the adoption of the of the auto-enrolment and the global crisis affect the individuals' attitude towards pension funds, though in opposite directions

# Possible Solutions (1)

The impact of financial crisis on savings decisions: evidence from Italian pension funds

M. Maré, L. Di Gialleonardo, A. Motroni, F. Porcelli

Introduction

Motivation and main conclusions

Preliminary considerations

The econometric application

General comments and policy implications

- improvement but not resolution: work with changes rather than levels (transitions)
- If a proper control group existed you could base your identification strategy on a proper diff-in-diffs (or diff-in-discontinuity) approach  
...but the global financial crisis is a GE matter (no SUTVA).

# Possible Solutions (1)

The impact of  
financial crisis  
on savings  
decisions:  
evidence from  
Italian  
pension funds

M. Maré, L.  
Di  
Gialleonardo,

Introduction

Motivation  
and main  
conclusions

Preliminary  
considerations

The  
econometric  
application

General  
comments and  
policy  
implications

- improvement but not resolution: work with changes rather than levels (transitions)
- If a proper control group existed you could base your identification strategy on a proper diff-in-diffs (or diff-in-discontinuity) approach  
...but the global financial crisis is a GE matter (no SUTVA).
- The financial year 2008-09 was associated with falls in asset prices.
- Large shock to individuals' wealth holdings, particularly affecting those close to retirement
- Real effects: the increase in the probability to be unemployed or under-employed

# Possible Solutions (2)

The impact of financial crisis on savings decisions: evidence from Italian pension funds

M. Maré, L. Di Gialleonardo, A. Motroni, F. Porcelli

Introduction

Motivation and main conclusions

Preliminary considerations

The econometric application

General comments and policy implications

Several margins on which an individual can react

- expectations of the likely inadequacy of pension resources
- expectations of leaving a bequest
- planned retirement age

# Possible Solutions (2)

The impact of financial crisis on savings decisions: evidence from Italian pension funds

M. Maré, L. Di Gialleonardo, A. Motroni, F. Porcelli

Introduction

Motivation and main conclusions

Preliminary considerations

The econometric application

General comments and policy implications

Several margins on which an individual can react

- expectations of the likely inadequacy of pension resources
- expectations of leaving a bequest
- planned retirement age
- current level of consumption
- rebalance portfolios in favor of safer assets

# Possible Solutions (3)

The impact of  
financial crisis  
on savings  
decisions:  
evidence from  
Italian  
pension funds

M. Maré, L.  
Di

F. Porcelli

Introduction

Motivation  
and main  
conclusions

Preliminary  
considerations

The  
econometric  
application

General  
comments and  
policy  
implications

- Could tackle your identification problem by sketching some behavioral hypothesis on which indexes the different assets are exposed to

# Possible Solutions (3)

The impact of financial crisis on savings decisions: evidence from Italian pension funds

M. Maré, L. Di Gialleonardo, A. Motroni, F. Porcelli

Introduction

Motivation and main conclusions

Preliminary considerations

The econometric application

General comments and policy implications

- Could tackle your identification problem by sketching some behavioral hypothesis on which indexes the different assets are exposed to
- regress the membership status and/or the share of savings directed to that investment against:
- the changes of the individual-specific price changes experienced by the individual
- taking into account the persistency of the membership status

Di  
Gialleonardo,  
A. Motroni,  
F. Porcelli

Introduction

Motivation  
and main  
conclusions

Preliminary  
considerations

The  
econometric  
application

General  
comments and  
policy  
implications

- Supplementary pension still a **superior good** in Italy  $\Rightarrow$  not consistent with ensuring future adequacy of pensions.

# Pension funds for all? (1)

The impact of  
financial crisis  
on savings  
decisions:  
evidence from  
Italian  
pension funds

M. Maré, L.  
Di  
Gialleonardo,  
A. Motroni,  
F. Porcelli

Introduction

Motivation  
and main  
conclusions

Preliminary  
considerations

The  
econometric  
application

General  
comments and  
policy  
implications

- Supplementary pension still a **superior good** in Italy  $\Rightarrow$  not consistent with ensuring future adequacy of pensions.
- Mandatory TFR transfer to PFs effective tool for adequacy?
- Rather, much work should be done to make PF a **normal good**.

# Pension funds for all? (2)

The impact of financial crisis on savings decisions: evidence from Italian pension funds

M. Maré, L. Di Gialleonardo, A. Motroni, F. Porcelli

Introduction

Motivation and main conclusions

Preliminary considerations

The econometric application

General comments and policy implications

- Tax incentives more oriented to the main goal: foster retirement savings of individuals more at risk
- Tax incentives more progressive

# Pension funds for all? (2)

The impact of financial crisis on savings decisions: evidence from Italian pension funds

M. Maré, L. Di Gialleonardo, A. Motroni, F. Porcelli

Introduction

Motivation and main conclusions

Preliminary considerations

The econometric application

General comments and policy implications

- Tax incentives more oriented to the main goal: foster retirement savings of individuals more at risk
- Tax incentives more progressive

Moreover, much more important seems to be

- Expected returns
- Pension asset volatility
- Liquidity
- Portability for temporary contracts and discontinuous careers
